Overview

The Standard Procurement System (SPS) is a major acquisition program, which develops tests and deploys a suite of software products designed to automate and standardize the procurement process throughout the Department of Defense (DoD).

The mission of the DoD's SPS Program is to deliver world class support to all contracting professionals who use the Procurement Desktop Defense product suite to acquire supplies and services at over 750 sites around the world. The SPS program is dedicated to improving support to the warfighter by bringing greater efficiency and accountability to the DoD procurement process through the use of a standard automated business system.

Capabilities

The SPS program provides modern automation tools to the contracting community, thereby helping procurement professionals deliver the best supplies and services to our warfighters on time and at reasonable prices.
The core product deployed by the SPS program is a client-server application known as Procurement Desktop Defense or "PD2", which is a robust contract writing tool. The SPS program also provides an "Adapter", which facilitates the exchange of contract data with other DoD systems, such as those supporting logistics and finance.

Benefits

- Provides DoD standard contract writing capabilities ensuring compliance with statutes and regulations;

- Incorporates data edit checks to help ensure legal and financial sufficiency.

- Provides key contract data that can support market research and spend analysis;

- Provides a "stand-alone" version for contingency contracting known as Standard Procurement System - Contingency.

- Uses automation and standardization to increases data integrity across DoD.

SPS is a program under the Business Transformation Agency's (BTA's) Defense Business Systems Acquisition Executive (DBSAE) directorate. The DBSAE is responsible for driving the successful implementation of DoD systems and initiatives in support of the Department's business transformation goals. BTA's mission is to develop, coordinate, and integrate projects, programs, systems and initiatives providing DoD enterprise-wide business capabilities to the warfighter.
